

Project Design Phase
Problem – Solution Fit Template

Team ID	SWTID-2026-2605
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Template (completed for this project):

Problem-Solution fit canvas 2.0		Purpose / Vision: Automate bulk employee data migration from Excel/Google Sheets into ServiceNow using Import Sets and Transform Maps, without duplicates or manual errors.	
Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? • HR / Admin teams who receive bulk employee data as Excel or Google Sheets files. • ServiceNow admins and beginners who must load external data into the platform. • Organizations that keep employee details across many departments (ServiceNow, Salesforce, etc.).	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? • Data arrives only as spreadsheets (.xlsx) from external sources. • Limited time - hundreds of rows cannot be typed manually. • Source columns must match target fields; data must stay accurate. • Needs admin access / ACL rights (e.g. dashboard creation). • Beginners have little scripting knowledge.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? • Manual entry of each record - slow and error-prone. • Sharing Excel files by email with no central system. • Custom scripts / REST integrations - powerful but complex for beginners. • Import Sets + Transform Maps - built-in, no code, reusable.
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? • Migrate bulk employee data from a spreadsheet into ServiceNow quickly and accurately. • Avoid duplicate employee records on repeated imports. • Update changed details (name, email) without re-creating records. • Get visual insight into employees by department and location.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? • Employee data is stored in disconnected spreadsheets, not in the ServiceNow platform. • Manual copy-paste causes typos and missing rows. • Without a unique key (Employee ID), re-importing the same file creates duplicate records.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? • Types or copy-pastes employee rows one by one. • Re-uploads files and checks records manually for errors. • Asks IT / admin to fix duplicates and wrong data. • Builds separate Excel charts for headcount reports.
Focus on J&P, fit into BE, understand RC	3. TRIGGERS TR What triggers customers to act? • New employees are onboarded; details arrive in Excel. • A corrected sheet arrives with changed names/emails. • Management asks for headcount reports.	10. YOUR SOLUTION SL Solution that fits within customer limitations, solves the problem and matches customer behaviour. • Load the Excel file into staging table u_employee_import using Load Data . • Create Transform Map Sample Spreadsheet Import mapping to custom table Employee Test (u_employee_test) . • Enable Coalesce on Employee ID so repeat imports update records instead of duplicating them. • Validate via Transform History (inserts / updates / ignored). • Build 3 Reports (Pie, Bar, List) and combine them in the Employee Analytics Dashboard .	8. CHANNELS of BEHAVIOUR CH What kind of actions do customers take online? • 8.1 ONLINE - Uploads Excel via ServiceNow Load Data, checks Transform History, views Reports and Dashboards in the browser; prepares data in Google Sheets. What kind of actions do customers take offline? • 8.2 OFFLINE - Receives employee lists by email or from HR meetings as Excel files; discusses headcount reports in team reviews.
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? • Before: stressed, worried about errors and duplicates, overloaded by repetitive work. • After: confident, in control, trusting the data and saving time.		
Identify strong TR & EM			Extract online & offline CH of BE
