

Project Design Phase
Proposed Solution Template

Team ID	SWTID-2026-2605
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations receive bulk employee data as Excel/Google Sheets files from external sources. Entering these records into ServiceNow manually is slow and error-prone, and importing the same file more than once creates duplicate employee records. There is no simple, reliable way for beginners and admins to migrate, update and monitor this data.
2.	Idea / Solution description	Use ServiceNow Import Sets and Transform Maps to load the spreadsheet into a staging table (u_employee_import) and map it to a custom target table, Employee Test (u_employee_test). Enable Coalesce on Employee ID so repeated imports update existing records and only insert new ones. Validate results with Transform History, then build three reports (Employees by Department – Pie, Employees by Location – Bar, Employee List – List) and combine them in the Employee Analytics Dashboard.
3.	Novelty / Uniqueness	A completely no-code, end-to-end approach that covers loading, mapping, transforming, de-duplicating (Coalesce), validating and reporting in one flow using only built-in ServiceNow features. The same Transform Map can be re-run any time with new files, and the project demonstrates insert / update / ignore behavior on real sample data.
4.	Social Impact / Customer Satisfaction	Saves HR and admin teams hours of repetitive data entry, reduces human error and gives leadership trusted, up-to-date employee data. Staff are relieved of tedious work and can focus on higher-value tasks; beginners gain a clear, practical learning path for ServiceNow data import.
5.	Business Model (Revenue Model)	Delivered as a reusable ServiceNow implementation / accelerator: a one-time setup or implementation service fee, optional support and maintenance subscription, and

S.No.	Parameter	Description
		training or workshops for admin teams. It can also be packaged as a template (custom table, transform map, reports and dashboard) for other clients.
6.	Scalability of the Solution	Import Sets handle large row counts and any number of files. New fields, departments or target tables can be added by extending the Transform Map, and the approach extends to other data such as users, assets, locations or incidents. Scheduled imports, data sources (JDBC, REST, LDAP) and dashboards can be added as data volumes and users grow.
